

FJL Postdoctoral Fellowships

Application guidelines

Important dates:

- **December:** announcement of the call and opening of the online application system.
- **Mid-February:** deadline for submission. Specific date will be announced on the website.
- **April:** evaluation of the application by a panel of experts.
- **June:** results will be communicated to the applicants.

Electronic application submission

Applications should be submitted through our online management system.

Please follow the link [APPLY FOR A POSTDOCTORAL FELLOWSHIP](#) on our website.

Aim and scope

The Jerome Lejeune Foundation initiates, develops and finances fundamental, translational and clinical research programs in Down syndrome and other intellectual disabilities of genetic origin. The Foundation supports innovative research that will deepen our understanding of these disorders and that can lead to the discovery and development of therapies and treatments.

The FJL postdoctoral fellowships are aimed to support the career development of outstanding young scientists working on fundamental, translational and clinical aspects of Down syndrome.

Research topics supported

Research proposals must fall within the priority research areas defined by the Jerome Lejeune Foundation strategic plan. The 2021-2022 call for FJL Postdoctoral Fellowships is aiming at supporting promising young scientists working in the following topic:

Down Syndrome and Co-occurring disorders

Namely, pathologies that are present also in the general population and for which people with Down syndrome are at increased risk such as (but not limited to) Alzheimer's disease, autism, leukaemia, epilepsy, hypotonia, cardiovascular disease and diabetes. Projects must focus on understanding relevant aspects (fundamental and/or clinical) of these co-occurring conditions in the context of Down syndrome. Only research projects focusing on the above topic will be considered for funding.

Duration and Funding

- 1) Fellowships are awarded for a maximum of two years to carry out their research project.
- 2) Fellows are awarded a fellowship amounting to € 130.000*.
- 3) Payments are made in three instalments to the host institution:
 - a. An initial payment (50 % of the fellowship amount) is made when the fellow starts the research project.
 - b. A second payment (40 % of the fellowship amount) is made at 12 months, following the reception of the intermediate report (see terms and conditions).
 - c. A final payment (10 % of the fellowship amount) is made following reception of the final report (see terms and conditions).
- 4) Fellows must start their project no later than eight months after approval of the fellowship.
- 5) The fellowship is mainly intended to cover the salary of the researcher. However, if the salary costs are lower than the fellowship amount, it is permitted to use the fellowship to cover academic communication activities (conferences, workshops, publication costs), small equipment and/or resources and other justified expenses within the scope of the research project.

*For some particular countries the fellowship amount can be adjusted in accordance to national postdoctoral salaries. Negotiation is subject to the reception of an official request by the host institution indicating the current national or institutional legislation regarding the salary grid for postdoctoral fellows.

Eligibility

Applicants of any nationality must hold a PhD degree or equivalent (MD, PsyD...) at the start of the fellowship, but not necessarily at the time of the application.

- Applicants who already hold a PhD degree are eligible up to ten years after obtention of their PhD degree. Exceptions are made for applicants with career breaks due to parental leave, mandatory military/civil service or illness. Additional exceptions might be made on a case-by-case basis, in which case, the applicant must contact us prior to applying.
- Applicants should be presented by one host laboratory, but a past, present or planned mobility period (ideally international) is preferable.
- The request should fall within the topic of the fellowship. The topics related to each call will be announced on the website (link).
- Applicants may only submit one application at each round of selection.
- Current holders of a JLF fellowship who would like to re-apply in order to insure the continuity of a promising/outstanding project, have the possibility to do it once. They will have to include in the application a comprehensive report (see Structure of the project file below) of the ongoing work as an annexe.
- Proposed projects must address academic basic or medical research and not “Research & Development” linked to commercial development. However, applications to develop a basic research project within an industrial or for-profit research laboratory are eligible.
- Applicants that hold a permanent position in the host institution or elsewhere, are not eligible.

Application process

Applications for an FJL Postdoctoral Fellowship are accepted via the FJL online application system.

The application deadlines will be announced on the website at the beginning of December. Complete applications will be evaluated in the Spring and results will be announced no later than June.

The online application system will be open in December. Applicants need to register for an FJL online application account. Once the registration email has been received applicants can start an application.

Applications must be written in English and follow the formatting and structure outlined below.

Structure of the project file

Formatting:

- Maximum 5 pages including figures. Ethical statements, references and annexes do not count on the page limit.
- Font: Arial, 10

- Line spacing: single spaced.
- Page: A4 and all margins (top, bottom, left, right) should be at least 15 mm.
- Include a header with the applicant's last name and year of the call.
- Format: PDF

A template is available in the online application system and on the website:

<https://www.research.fondationlejeune.org/post-doctoral-grants/>

Content:

- 1- Project title.**
- 2- General presentation.** Including scientific/clinical background, state-of-the-art and rationale of proposed work.
- 3- Overall aim and key objectives.**
- 4- Research methodology and approach.** including experimental methods, techniques and statistical analyses to be used. When applicable, describe and justify the choice of animal model.
- 5- Originality and innovative character.**
- 6- Impact in the field and potential therapeutic/clinical applications.**
- 7- Work plan/time schedule.** A Gantt chart should be included.
- 8- Team description and feasibility of the work.**
- 9- Ethical statement:** Please write a maximum ½ page indicating the ethical aspects of the proposed work if applicable (e.g. work on animal models and/or human subjects) and a statement of compliance with all applicable international, national, and/or institutional standards.
- 10- References.** Use a full citation style for all the references. Please highlight team publications and include DOI or active PubMed links for the team publications only.
- 11- Annexes:**
 - Short bio of the future research supervisor and a list of main publications.
 - Letter of acceptance from the Head of the host laboratory.
 - One or two letters of recommendation with contact details and signature of the referees. One letter of recommendation must come from the candidate's supervisor in the laboratory of origin.
 - For current JLF fellows only: a comprehensive report of your ongoing work highlighting results, publications (if any), importance of the outcomes and justification for re-application. Only outstanding projects will be considered.

Evaluation and selection process

The most important evaluation criteria applied by the evaluation panel of the FJL Postdoctoral Fellowships are scientific excellence of the candidate, the research project and the host institution.

Applications will initially be checked to ensure that they meet the all eligibility criteria for the fellowship. Applications not meeting the eligibility criteria will be rejected at this time.

Applications will be evaluated and ranked by a panel of experts composed of external experts and members of the Jerome Lejeune Foundation Scientific Advisory Board. Selection will be primarily on:

- Applicant's CV and performance based on reference letters.
- The project's scientific excellence, novelty, feasibility, biological significance and potential impact on clinical or therapeutic applications.
- The suitability of the host institution for the proposed research.

The Scientific Advisory Board will review and approve the ranking proposed by the panel of experts.

The Board of Directors of the Jerome Lejeune Foundation will take the final decision based upon the recommendations of the Scientific Advisory Board and external reviewers.

Terms and conditions

Financing terms

- Funding duration: 24 months.
- The starting date of the fellowship must be no later than 7 months after the month of award.

Reporting

Fellows commit to submit a scientific and financial report at 12 months into the fellowship (intermediate report). A final report is due upon completion of the project, including all relevant outcomes (publications, patents, etc.).

Commitments

- Applicants must adhere to the principle that **the funds provided by the Jerome Lejeune Foundation cannot in any way be used to purchase or make use of human embryonic or foetal stem cells or tissues or another biological material obtained through abortions or in vitro fertilisation, or be used to create new human germinal cells.**
- Results from studies funded by the Jerome Lejeune Foundation cannot be published in the same article alongside results obtained using human embryonic or foetal stem cells or tissues or another biological material obtained through direct abortions or in vitro fertilisation.
- Researchers must adhere to the highest standards of research practice and integrity and follow academic, national and international standards of Good Scientific Practice (GSP), Good Laboratory Practice (GLP) and/or Good Clinical Practice (GCP).

- Research must be carried out in accordance with all the legal, health and safety, ethical and regulatory requirements relevant for the field.
- For research involving human subjects and/or model organisms, all ethical approvals and licences required to carry out the research must be obtained prior to the commencement of the study and must be in place throughout the research.
- When research involves human subjects, researchers are obliged to protect the rights, interests and safety of research participants.

GDPR (General Data Protection Regulation)

- In the scope of its research mission related to genetic intellectual disabilities, the Jerome Lejeune Foundation collects the personal data from the researchers who are applying. The data or information highlighted by an asterisk are mandatory for the processing of your application. The other data or information are optional and will be used, when provided by the applicant, for the production of our internal statistics. Other data related to the applicant and available from the public domain (for instance references of scientific publications) may be collected as well by the Jerome Lejeune Foundation.
- The processing of personal data from researchers is performed for the legitimate purpose of supporting the evaluation of the application and the selection of the candidates, the management of the relationship with applicants and successful candidates, as well as the promotion of the research projects and of the Jerome Lejeune Foundation.
- We do not transmit the personal data from researchers to any recipient other than the members of the staff of the Jerome Lejeune Foundation in charge of the management of the research projects, or the members of the Scientific Committee, or our partner in charge of the maintenance of the IT application and working under a GDPR compliant contract.
- The data is stored for a maximum duration of ten years following the end of the relationship or contract between the researcher and the Jerome Lejeune Foundation. The data is then archived, restricted to the minimum information required for long term retention, and access is restricted only to the administrator from Jerome Lejeune Foundation. Your account is also inactivated and anonymized unless other applications are still in progress.
- If you are a researcher concerned by the processing of your data, you can at any time exercise your right to object to it, or your right to ask for its restriction. You can also exercise a right of access, a right to rectification or to erasure of your data. For any request please contact us at the email address dpo@institutlejeune.org.
- You have also the right to lodge a complaint with the data protection supervisory authority from the country where you are established. Please consult the web site <https://edpb.europa.eu> to find more information about your supervisory authority.
